Rodents

Outside

Address: 361 9th Street, Midrand

Date	Area	Treatment Done:
Mar 2019	Building 1 – Acacia	<ul style="list-style-type: none">Your snail infestation has spread. This caused your rodent activity to increase. We found evidence of rodent activity in the far corner of the building.
	Building 2 – Baobab	<ul style="list-style-type: none">All rodent boxes were rebait – out of these boxes only 2 were baited for rodents, the rest needed to be baited due to snails.
	Building 3 – Coral	<ul style="list-style-type: none">The activity at this building has decreased, although we had to rebait 3 of the boxes in total.
	Building 4 – Flamethorn	<ul style="list-style-type: none">The rodent activity at this building is still manageable at this stage.This building also have evidence of snails.This will cause your rodent activity to increase again.
	Building 5 – Dombeya	<ul style="list-style-type: none">We found evidence that the rodent activity increased at this building.This building will be monitored closely.
	Building 6 – Gardenia	<ul style="list-style-type: none">All boxes at this building were checked and re-baited
	Building 7 – Ebony	<ul style="list-style-type: none">All boxes were checked and re-baited / There was an increase in activity, but is still manageable at this stage.
	Refuse area	<ul style="list-style-type: none">All boxes were checked and re-baitedIncreased rodent activity detected in the main refuse area only due to the refuse bags not being taken away immediately

Area	Findings
General findings	Pestimators has found evidence of snails at each of the buildings. The snails are eating the rodents bait. This causes your rodent infestation to increase at some areas. If the snail problem is not treated correctly, your rodent infestation will increase again to an unmanageable state.
