Customer: Topaz Court

Rodents

Outside

Address: 7 Iris Cres, Murrayfield, Pretoria

Date	Area	Treatment Done:
Jan 2019	Outside – Garden and road side	<ul style="list-style-type: none">- All tamper proof boxed were re-baited. There are still an increase in activity on the garden and road side.- This is starting to become manageable, but must still be monitored- Pestimators noticed that some of the bait in the boxes on the garden side, are still being eaten by snails and not by rodents. We will be able to help you with a quotation to spray every month / second month to get this under control.
Jan 2019	Outside – Washing and refuse areas	<ul style="list-style-type: none">- All tamper proof boxed were re-baited. There is still activity at these areas, but are currently manageable.- The refuse area will be monitored as we noticed an increase in activity
Jan 2019	Outside – Ledges and veranda roofs	<ul style="list-style-type: none">- All tamper proof boxed were re-baited.- We have noticed that the activity did decrease, but this area will be monitored closely due to the increase in activity on the garden and road side.

Area	Findings
Outside	<ul style="list-style-type: none">- It is our recommendation that you do a treatment for garden snails as well.- The snails are feeding on the rodent bait that will cause an increase of activity in all areas of the complex.- This treatment can be done every month or every second month, depending on the infestation
