Gen Insects

Ants

Outside

Address: Aletta Street 189/2, Raslouw, Centurion

Date	Area	Treatment Done:	Pest
04 Nov '17	Outside	<ul style="list-style-type: none">The entire playground, lapa area, general lawn area and paving around all buildings were treated for Ants and other General Insects.	Ants and General Insects

Area	Findings
Outside	<ul style="list-style-type: none">The school have a big infestation of all species of ants. We found that all though we soaked the lawn and playground areas, the poisons only took effect a few minutes after treatment, due to the colony size.As we treated each area, we noticed that the ants originated from the foundations of the classrooms. It is our opinion that the main nest or colony is situated under the foundation of the main building.Due to the many species of ants, this indicates to us that there is more than one colony on the premises

Recommendations

Option 1 – Long term solution:

- To provide treatment for ants and termites as per the SABS approved method of drilling into foundations, inject chemical and re-seal
- This treatment also include the spraying of all common areas – playgrounds, lawn area, lapa area and paving around the main building

Option 2 – Monthly Treatment:

- On a monthly basis, a non-pet and human friendly residual spray will be sprayed on the outside perimeters of the property, as well as all common areas (playgrounds, lawn area, lapa area and paving around the main building)
- This treatment plan is recommended for a minimum of 06 months, due to the size of your infestation
- It is recommended to do a follow up treatment every 3-4 weeks between treatments. This is in order to break the life cycle of the pest.
